Create the coming Future

The growth of developed countries stops. And the capitalism economies may collapse at any moment. In such a bipolarizing world, Japanese firms do not have many choices, but to expand their business oversea. In a severe era like this, I think that it is the time we, Lami Corporation, need to face the question, "What kind of growth are we looking for?"

While aiming at providing better services to domestic customers, strengthening the sales engineer department, engaging in developing well-differentiated products, yet nevertheless what matters more is "Corporation is of human resources." We think that developing human resources is a crucial topic. I look forward to Lami becoming a 100-year-old corporation. Having staffs who are intelligent and creative, colleagues who help each other, employees who have perseverance to continue essential tasks, and working on differentiating ourselves from rivals domestically as well as globally would be the very key for us to move on.

I hope to have your continuous support. Thank you.

CEO Akira Okuno

CHANGE and CHALLENGE

By the "know-how" cultivated in Japan, we challenge the world.

We develop our business proactively not only domestically but also globally. Our product is now widely used around the world.

In the journey, we are happy to find that our products can be proudly presented to overseas. In various exhibitions we regularly participate, we have been appreciated from customers of different nationalities. Now how we utilize the business opportunity would be the answer we have to seek.

We believe the know-how and the experience we developed in Japan would be a strong advantage to take us to the next stage.

Certainly it won't be easy, but we need to stay confident and keep challenging. We would stride for the best to provide our value-added products and services from Asia to Europe and America, and ultimately to the whole world.
